

Augmented Reality Made Easy!

The **BUNDLAR** Platform allows anybody, anywhere to create, edit, and deploy Augmented Reality (AR) experiences whenever they want, instantly, and on a global scale without having to write a single line of code.

With the world's first self-serve AR Content Management System, the barriers to widespread adoption like the need for expensive developers or uneditable one-off solutions are gone. Update each experience based on your timeframe and need to immediately inform your audience with just-in-time and immersive multimedia content like videos and interactive 3D models.

Our "bundling" technology also ensures a multitude of augmented experiences can be accessed without the Internet once downloaded to a user's device, ensuring instant and reliable interactions. Each bundle of experiences is also hooked into an analytics API that tracks every user interaction for a robust data set.

Scan the QR code and then point your device at the **BUNDLAR** business card!

DEMOCARD
POINT. TOUCH. LEARN.

Instantly Communicate with Employees, Students, & Customers

Augmented Reality (AR) is simply on-demand digital information placed on the real world delivered through a smartphone or tablet. All a user needs to do is point their phone camera at a designated trigger – like a sign, training material, or packing – to launch a video from a subject matter expert, a step-by-step guide, or an interactive and immersive 3D model.

- **Reduce costs + speed-to-market**
- **Increase productivity + engagement**
- **Provide immediate problem resolution**
- **Improve employee + customer experience + retention**
- **Curtail liability by providing up-to-date accurate, curated + trusted information**

ACCURATE. CURATED. TRUSTED. INFORMATION
